

1 ABSTRACT OF THE DISCLOSURE

2

3 An article of manufacture for cooking of food in a manner that may remove a
4 portion of the fat contained in said food, comprising a plurality of housing parts,
5 hingeably attached, with removable cooking surfaces to distribute heat generated by
6 heating elements, housing geometry that allows positioning the invention to cook in a
7 sloped, fat draining mode, a level mode, or a combination level and draining mode, or
8 closed mode, and geometry that allows efficient storage in the vertical orientation.
